

WE BRING CYCLING TO LIFE.

Saris Commercial Bike Parking Recycled Content Certificate

Saris products are primarily fabricated from steel, a fully recyclable material.

Steel Products:

The average recycled content of the steel used to manufacture our Bike Parking racks is at least 20% and can reach as high as 75%.

BOF steel:

Total recycled content: 32.9%
Post-consumer recycled content: 25.6%
Pre-consumer recycled content: 6.8%

EAF steel:

Total recycled content: 89.7%
Post-consumer recycled content: 50.6%
Pre-consumer recycled content: 33.3%

Stainless Steel Products:

All stainless steel products are 100% recyclable.

The typical re-melt rate for stainless steel is between 60 and 85%. Saris products are at least 60% recycled.

The use of North American steel building products contribute positively toward LEED points under Credits 4.1 and 4.2, under the Materials & Resources Credit 4 category.

To calculate Value, it is recommended to use the following formula:

Steel Recycled Content Value = (Value of Steel Product) (Post-consumer % + ½ Pre-consumer %)
